

MQ POWER[®]

Portable Generators

Our WhisperWatt® Super Silent and WhisperWatt Ultra Silent portable generators are engineered to operate in the most challenging environments and can be modified to meet any application. With standard models ranging from 10 kVA to 800 kVA, and the ability to customize a unit to fit any need, your options for a durable and reliable power generation solution are endless. That's why for over 27 years, MQ Power® has been the name to trust when you need quiet, dependable power.

WhisperWatt Generators from MQ Power—quietly leading the industry.

MQ Power generators are designed and built to withstand the toughest environments. WhisperWatts feature heavy-duty steel housings that are acoustically treated for maximum sound attenuation and protected against rust and corrosion with powder coat paint. The control panels are designed for durability and utilize the highest quality components to ensure long life. Just a few of the many features that make MQ Power generators the most reliable and longest-running generators on the market.

Our voltage output bus bar with plated copper lugs offers a durable, superior connection over standard aluminum lugs and hardware found on other units. And our innovative design allows available 120VAC GFCI duplex receptacles to be energized anytime the unit is running, regardless of the primary voltage setting.

The Ultra Silent series includes all of the features of our proven Super Silent line of portable generators. We then add a patented airflow design that circulates air to ensure quiet, efficient and reliable operation. The airflow design is complemented by our advanced cooling system that utilizes two separate air intakes, further reducing operating noise.

Also included on the Ultra Silent series is an integrated 24-hour fuel tank with a fluid containment system that, in case of failure, prevents spillage to the ground, reducing downtime and safeguarding the environment.

MQ Power WhisperWatt Super Silent and Ultra Silent portable generators are recognized the world over for quality, reliability, low cost of maintenance, and outstanding resale value.

MQ Power. The leader in durable, portable power.

62 dB(A)

56 dB(A)

When people talk about the Ultra Silent series, their conversations are louder than our generators.

When customers talk about our Ultra Silent line of generators, there is no need to shout—the quietest generators available on the market speak for themselves. Featuring an innovative design and a unique combination of components, our Ultra-Silent generators achieve sound levels 11 percent quieter than other gensets, measuring as low as 56dB(A)

Our portable generators come equipped with industry-leading diesel engine technology and provide simultaneous single- and three-phase power generation. When you need power, our patented open delta generator winding provides more precise voltage control, allowing you to start large motors with ease. Our automatic voltage regulator provides superior motor starting capability by supplying virtually unlimited voltage boost during motor start-up. Most WhisperWatt generators also feature an automatic start/stop control and an electronic governor to handle your most critical power requirements.

The first portable generators we created earned a loyal following in the rental and construction industries. Using innovation and leading-edge design, we have created products that can run equipment large and small, meeting customers' needs with a range of models. Our products are used on construction sites, at entertainment venues and sporting events. They power hospitals, schools and movie sets, and assist in disaster recovery operations. And with our world-class engineering capabilities, we can customize any solution to fit a specific need.

We couldn't find trailers that met our high standards for quality, so we designed and built our own.

All of our trailers are highway-rated, meet all FMVSS regulations, and feature heavy-duty welded steel-frame construction with replaceable bolt-on steel fenders, DOT-approved lighting systems and your choice of electric or hydraulic brakes. The same powder coat paint process used on our generator housings is applied to not just the trailer frame, but also the coupler channel, fenders and actuator, giving the trailer a durable finish that will stand up to the toughest of jobs. All trailers are fitted with adjustable coupler channels for quick height adjustments making it easy to adapt to different tow vehicles. The axles come with EZ lube grease fittings to quickly service the wheel bearings. And, as with our generators, we can customize our trailers with optional accessories to fit your specific needs.
