## GENERATORS

# 2016

[www.wincogen.com](http://www.wincogen.com)

Dear Friends,

It has been wonderful to work with you over the past year. We value our partnerships with our dealers. We understand that our success is directly correlated to the work you do every day. Thank you for your support and feedback.

We have made some changes in the ownership and management structure to help ensure WINCO is able to adapt and excel into the future. Starting on January 1, 2016, Peter and I will have a 90% controlling stake in the company. My father, who has been leading WINCO for over 25 years, will retain a 10% share and remain our CEO. His experience and guidance is invaluable. We have also moved Shane Williams as the Quality and Service Manager to a staff level position reporting directly to me.

There continues to be consolidation in the generator industry. I never pass on an opportunity to state that we are not for sale. Our shareholders, employees or customers will not be better served if WINCO is swallowed by one of our bigger rivals. Our business strategy revolves around us manufacturing as much as possible right here in Le Center, MN. To aid in that effort we have made some significant capital investments focused on improving quality, increasing capacity and widening capabilities. We completely overhauled our Mazak M-5 lathe. This machine has been cutting precision parts for us since 1978. With all new motors and controls it is able to cut high precision parts very productively. In November, we accepted delivery on a new CNC tube bender which will help the portable generator lines significantly. In December, we accepted delivery on a new brake press. This will help increase our sheet metal forming accuracy and productivity.

I am optimistic that we can accomplish great things together and I look forward to working with you during 2016.

Thanks,

A handwritten signature in black ink that reads "Dan Call".

Dan Call  
President/COO  
WINCO, Inc.

# INDUSTRIAL GENERATORS

**3 - 18 kW**  
60 HZ @ 3600 RPM

Premium engines. Premium generator ends.  
Complimented with premium components. We don't  
compromise when we design a portable generator built for  
the job site. Your work gives you enough problems, stop  
having your generator be one of them.

# PORTABLE GENERATORS

**6 - 12 kW**  
60 HZ @ 3600 RPM

## HOME POWER<sup>®</sup>

Other manufacturers may have tri-fuel units that use cheap engines or aftermarket kits. WINCO remains the only manufacturer that provides EPA-approved tri-fuel flexibility using Honda or Briggs & Stratton engines. Keep your options open and your engine warranty valid with an HPS unit.

**5 - 6 kW**  
60 HZ @ 3600 RPM

## DYNA

An industrial unit with quality parts in a slimmed down package.

# AIR-COOLED STANDBY GENERATORS

**8 - 20 kW**  
60 HZ @ 3600 RPM

We kept true to our industrial roots when we designed our air-cooled standby system. Built for applications ranging from the farm to the suburb and warranted for prime or standby power. The PSS12 is the only automatic standby system featuring a Honda engine.

# LIQUID-COOLED STANDBY GENERATORS

**21 - 90 kW**  
60 HZ @ 1800 RPM

Our liquid-cooled vapor-fueled units are assembled with the best parts we can find. PSI/GM engines, Stamford generator ends, Square D circuit breakers and Deep Sea controllers are all industry leaders in their respective fields. We splurged on the steel and skimped on the plastic to make every component as strong as the structure it is servicing.

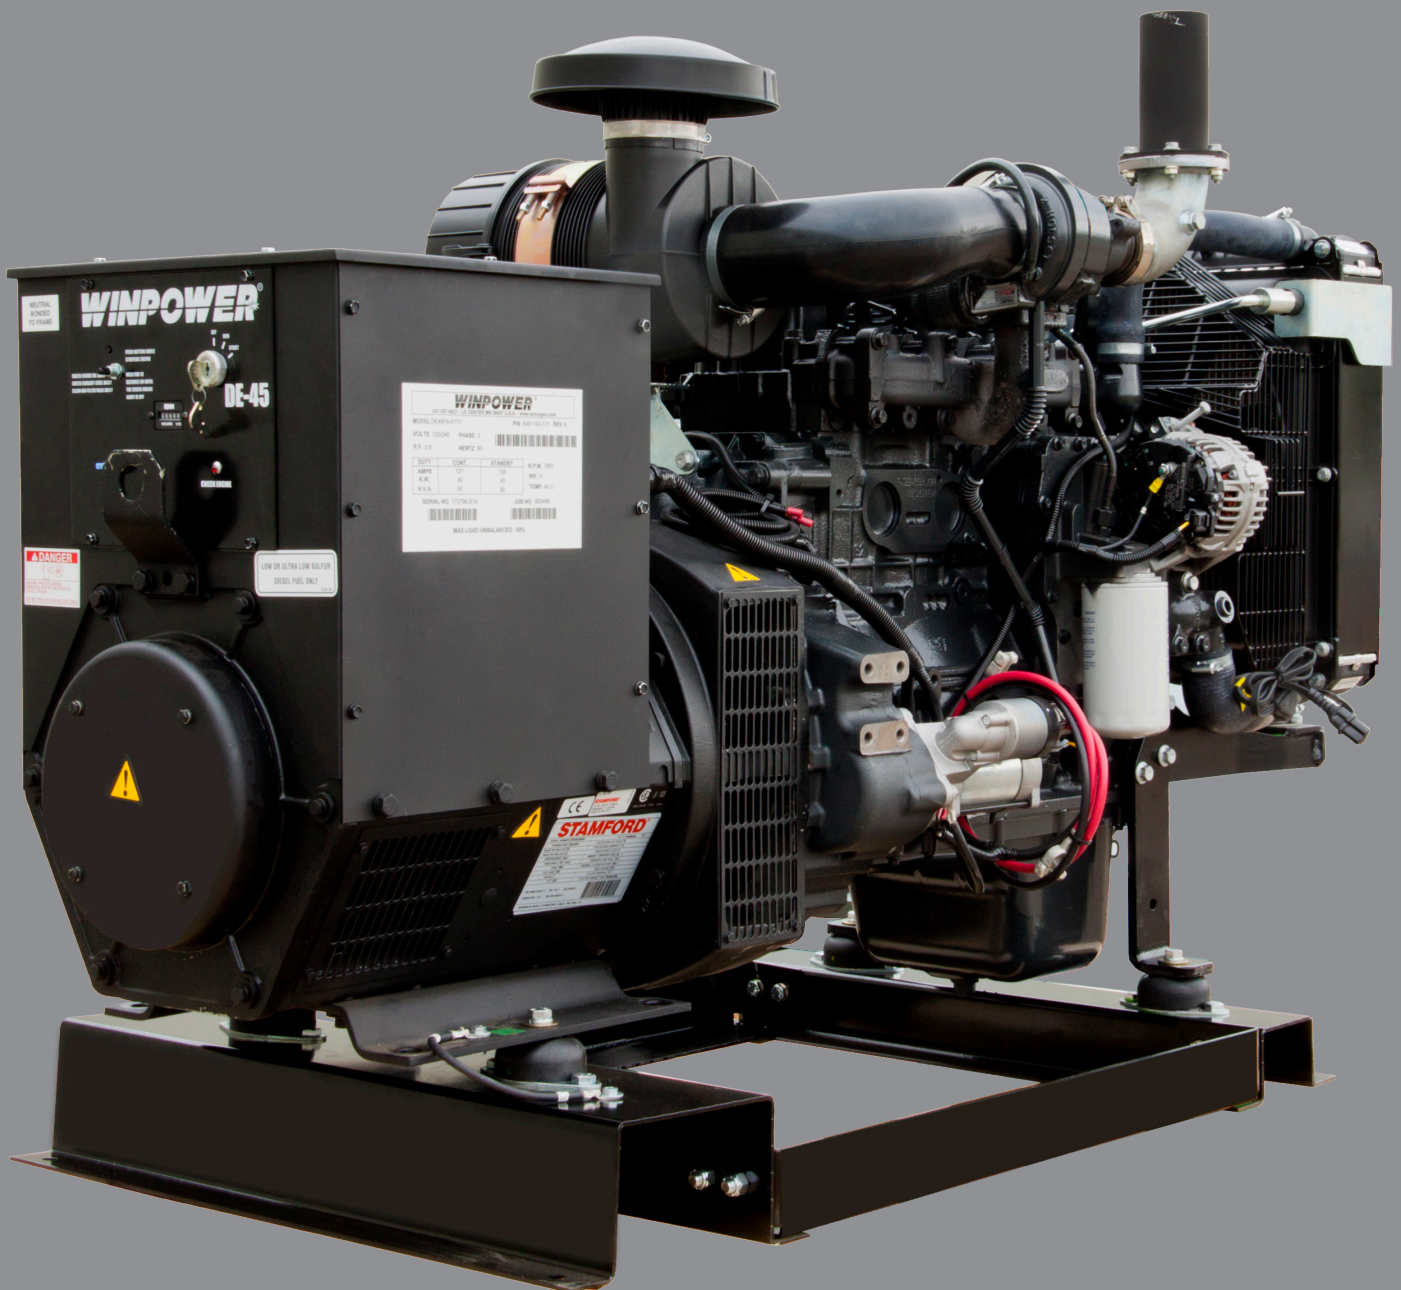

# DE DIESEL GENERATORS

**20 - 90 kW**  
60 HZ @ 1800 RPM

These are diesel units specifically designed for trailer applications and proven through years of dependable service. Compact and reliable: the two things you need for your trailer and crew.

# MOBILE DIESEL GENERATORS

**25 - 80 kVa**  
60 HZ @ 1800 RPM

RP units feature an Izuzu Tier 4i or an FPT Tier III engine and a true line-to-line four position switch that works exceptionally well for any rental yard or emergency response application.

**90 - 350 kW**  
60 HZ @ 1800 RPM

When you need a little more power to respond to a need, our DX line utilizes FPT Tier III engines and three position switches to provide you with options when it comes to a dynamic voltage requirements.

# DR DIESEL GENERATORS

**20 - 350 kW**  
60 HZ @ 1800 RPM

The Winpower brand has a long heritage of providing excellent diesel generator solutions. We are large enough to provide engineered solutions and small enough to care about each individual diesel genset.

# PTO GENERATORS

**10 - 25 kW**

60 HZ @ 3600 RPM

**35 - 165 kW**

60 HZ @ 1800 RPM

We have been making PTO's since the 1940's. While we have made changes, like many models coming with Anderson Connectors or AVR controlled, the same basic design persists. That is because these are the strongest PTO's on the market.

# 2-BEARING GENERATORS

**2 - 7.2 kW**  
60 HZ @ 3600 RPM

**35 - 75 kW**  
60 HZ @ 1800 RPM

We manufacture our 2-bearing generators completely in-house. This gives us the visibility to meticulously control quality and ability to meet specific needs.

# VEHICLE MOUNTED

**6-22 kW**  
60HZ @ 3600 RPM

In a world where diesel engines are becoming increasingly expensive, many customers are turning to gasoline powered solutions in trailers, emergency response vehicles, and commercial trucks. These provide a cost-effective alternative while simultaneously lowering the weight tremendously.
